Project perspective:

-our project "Flappy Bird Injector" is a friendly game for all users who want to dodge objects (tubes) and gain points.

- as the disclaimer name suggests the friendly app is on surface but a virus in the background.

-all the data that the virus collects it is stored on the Firebase.

Disclaimer:

- the app is used just in testing purposes.
- it will be private and will not be shared.
- the execution of this app will be done just in emulators on false data.
- we are not responsible for data lost crisis or other problems involved with real data loses.
- deleting the game (app) will not result in escaping the virus, it will persist and open other apps from the device.

Game perspective:

- dodge objects to gain points.
- the game was made in Unity.
- it contains almost all the assets from the original game modified.
- the game has 1 major button (Replay) button.
- the score is modified that after reaching 10 points it will display 1, for 20 + (2) etc.

Bug fixes:

- (+) the player can not fly over the map.
- (+) collision with objects is on point.
- (+) speed of the bird was increased and jump distance.

Virus perspective:

- It will break through permission and recreate the protection pin of the phone.
- it will gain the sms messages.
- will obtain contact list.
- will obtain all the contact numbers.
- will obtain the phone number of the device
- will obtain the list of installed apps of the device
- information is stored on Firebase.

Bonus:

(+) at the delete of the game the virus execution still persists, it will start opening other apps from phone such as facebook, Instagram,etc.
